Dr. George Englemann

Dear Sir

After a compulsory abandonment of Botany for several years, I find myself again in the ranks. - I hope to stay there. I must here offer my regrets that just at the time I might have been of some service to you in making collections for the various lines of work you have been engaged in I have had my hands so full that I was unable to attend to it. I do hope my dear Sir sometime to show myself ready to put material in your hands. I am now in daily expectation of being ordered to Arizona - nominally as Surgeon to Wheelers expedition but actually as Botanist. What direction have you to give me in regard to Cactaceae, Compositae or anything else? I shall do my best to attend to them.

Yours Truly

Dr. George Englemann

Wilkes-Barn. Luzerne Co. Feby 3rd 1875

Dear Doctor

I send you by Express to day a full set of the plants of the order to which you are devoted. Retain them as your own. In looking over that statement of Gentiana barbellata. I am now willing to admit the species. I had at the time of seeing you in St. Louis forgotten exactly what I had written and I think ~~I~~ the opinion expressed in my statement mean that my doubt falls rather on the identity of Mr Coulters specimen than on the species itself. However I may be wrong in both and no man will more cheerfully acknowledge himself I would like above all things an authentic specimen of barbellata if you could spare it.

Please when you have examined (at your leisure) the plants I send you give me the names & any notes you may wish published. And I will insert each order under your name. It would be an especial favor if you could send me in a few

57. Q. undulata 101 Opuntia arborescens

Dear Doctor

Dr

Should you find in what I have sent any thing new if you will favor me, possible furnish notes & description of the same. I will join it with a like report from Dr. Gray and have it published at an early date in Naturalist, getting a lot of Specimens attached for distribution

Should you want any further notes please let me know & I will furnish all I can — Only bear in mind my dear Doctor when I appear to have come short, in botanical collection, that Botany was but one of many equally peeping duties I have had to attend to, I would like to make one trip in which I have nothing but botany to look after.

yours cons of Pines

Wilks-Bay July 16. 1875

Dear Doctor

Have just received yours of 11,
Thanks for G. barbellata. I believe I have
among the Gentians I sent you G. Rigidizeni. Thays
the glands at the base of the filaments are not well
marked. It was a late flowering thing picked up by
accident. after the others had paper out of season. but
of this at your leisure. As for the Agaves
you dont send numbers so that I cant with
certainty identify, and would rather not attempt
answering until I can get the numbers.
Both and mescals to the indians I believe.
If you could give me the names of the oaks
and pines I have sought for a popular report
I would be under great obligations. I cant take
the field again until I hand it in and I cant
make the first step until I have the trees.
I am anxious to get off to the field at the very
earliest hour possible. Pinus Aristata, was
not collected by me. and came to the office
without label. I failed to get the least clue to
its habitat. I will gladly send the bags you

Rec'd - Febr 26th
Ans ——27

Tucson Bar. July 21, 1875

Dear Doctr Engelmann

Yours of 15 is just at hand.
I had mislaid the package of willows and find they got into
your collection. I was going to send them to Bebb, but if you will,
name. Take out a set for yourself and return me the rest; all
right, but I fear it is putting you to too much bother. Thanks for
so kindly furnishing me the names. And send for your
question. = Arenaria lanuginosa 69 was collected June 19, 1874
787 = Mt Graham. Sept. 21st, 1874 I send specimens
of 496 the best I have. Retain them for yourself. As to
habit this so much resembles A. Pamii collected
at Rocky Canon. 274 in habit & not leaves. Plum
And Thinking that I must could convince myself
Husband they were not the same. Both are called
Muscal.

Now as for 654. That pine I can speak to
having collected. the branches for I climbed 20
feet up the Tree to get them. And I remember that the
leaves looked much like P. flexilis. Now number
654 is from Santa Rita Mountain. And I had last
number of 1001. and added that to identify it in
our various questionings. I find under 1001
that I had identified the Tree as one of the Sonnaita valley &c.

This valley is eastern slope of Santa Rita which in turn on abut 30 miles east of Fresno - So I am now sure that 654 and 1001 are from the same tree, How will the cone suit.

I am almost positive that the cone with the base broken off is from 652, & am 654 came from within 20 feet of each other. My notes are positive as to location etc, & remember distinctly the cone and the tree. I wish you would not post to name that Pinus Oscar Lowe & Lowii he first discovered it as he says I did but bought in only a fragment, & found it quite abundantly on Mt of Mt Graham. The pine 1001 = 654 and the 496 I send by mail certain both — I shall always be ready to answer all questions that I can.

Yours Ever

S. J. Rothrock

Thanks for Ent. Labellata - Pany has also been good enough to send me a specimen —

Dear Doctr

Let the Atalanta go for Dr. Loew; he has earned a recognition in many ways. besides he last year (1873) picked up a small fragment - and I obtained it - this year at another point much more abundantly But he first found it; & let him have the name,

Am as for pinus. I confess to a deal of bewilderment about it - since your letter but I cannot see how I can be mistaken. I remember this positively that I can identify 1001 as 654. That I climbed to the top of 654 for a green cone that was yet so pesh that the turpentine oozed out of it with my fingers, and that I only obtained one at that tree. I will hunt for the other if I have it; I further remember that tree was spoken of by the lumbermen in the Santa Rita Mountains as rare. These are the facts of which I am positive. Of what other tree

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

I could have taken it - I am fast to remember.
Still I leave it entirely to your decision, for I
know such Transportation do occur, but I
"put it in my bones" that I can't well be
mistaken, & must walk a hundred miles to
climb that tree again, and settle the
matter.

Mt. Graham is in Arizona. South of the Gila, and about
40 miles west of the line between Arizona & New Mex
On the map accompanying Simpsons
Expedition, it is put down as Long 110, Lt.
It is about 40 miles East, of Mt Graham &
The two are Companion peaks,
the present Camp Grant is just South
of Mt Graham at its foot, Camp Bowie
is S. E. of Grant about 60 miles & is in New
Mex Camp Apache, is nearly West of
Fort Craig on the Rio Grande, about 150 miles
in a direct line, but about 200 by the road
Dragoon Mountains are about 60 miles S of East
from Tucson. They are the great Stronghold of
the Apache Chief Cochise my dear, they stand
right out on the open plain Sienega or Cienega
is 30 miles N. E. of Tucson Camp Lowell is 5. miles

Wilkes-Barre Luzerne Co Pa
Jany. 7. 1876

Dear Doctor

Mr Uhler asks me to obtain receipts from all who have received plants from the Collection made by his party. Will you be kind enough to forward to me at your earliest Convenience a receipt for plants collected in 1874, from Lieut Geo. M. Wheeler per Dr. J. T. Rothrock. You need not specify numbers, but state the Groups. I think they were Cactaceae, Arcenthobium, Gentianaceae Cuscuta, Euphorbiaceae Asclepiadaceae, Yuccas, Agaves, & Conifera. Juncus also. I believe these were all. I regret very much to have to ask so unusual a thing but Mr. U. is acting this year very singularly. He cuts me off from sending plants to any specialist, unless I comply with some impossible condition he names, I am thus deprived of the benefit of botanical assistance

in preparing my work. and I think I shall therefore decline to assume the task of making a final report. only to modify his demands. I have many Californian things collected this year - that I want to send you but cant do it - without his permission.

I can without making any further explanation of his conduct say that he does not attribute any thing dishonest or dishonorable to me or to those who have received material from the Expedition. It is simply one of his very foolish whims. I would not have written this much except that I felt bound to do so. I have had trays set made out for three weeks but cant send it. It is an outrage to which he makes me an unwilling party.

Yours. Truly

MISSOURI BOTANICAL GARDEN

I do not fully understand what you mean by consolidating different reports? I can properly, I think, only write about what I have seen and examined; and that is the collections made in 1874 and 1875 by Dr Rothrock. Of course I could not be well responsible for what others have done. I remember, though, of having examined some few specimens collected in former years by your corps, especially Compositae and Loranthaceae, sent to me I think by Mr Watson and returned to him. But I have kept no list of them.

I will do however in this matter as much as I can. Please inform me further about it.

Perhaps it would be best as you suggest in your letter,

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

to let me have ~~that~~ the genera or families above enumerated, of the older Collections, to be returned to Washington as soon as studied.

With the assistance of the species I could readily elaborate these plants, and report on them in the manner you desire.

But I should also require full labels, which I often find very insufficient, as to locality or date and other information, not imparted by the specimen itself.

Sometimes the specimens are so incomplete that a full botanical description or even determination of the species becomes impossible. And then it would have been a great deal better if all the material collected would have been

understanding

entrusted to me, with the request
to return all but one specimen.
Even 20 specimen, you know,
are often not too much, for
studying a new or difficult
plant, one will exhibit, what
another does not —

Very respectfully

G. Engelmann

Dear Doctr

I had just received yours of 8th I will answer the general enquiries to night and then to morrow take up the particular inquiries. 1st As to my labels - They are the same both we had for our last season, and none have been changed had we had any need ones struck off. Lake Elizabeth is about 70 miles N.E. of Santa Barbara and just north of the divide which is north of the head of Santa Clara Valley. Fort Tejon is 25 miles South of Kern Lake. Mt. Pinos is S. W. of Kern Lake say 30 miles on one of the highest Eastern Spurs of the Coast range It is nearly 8000 ft high. Walkers Basin is say 30 miles East of Kern Lake in the Southern portion of the Sierras. Alt. 3400 ft. It is not over 4 miles x 2. Walker is just above where Kern River divides into the North & South forks which should instead be called East & West forks. Tejon Pass turns out as I had conjectured it might be. Photinia, Peru Ch is Say 50 miles East of Santa Barbara in the Coast range. Mt. Pinos is 12000 ft high just West of Owens Lake. The points I have used as land Marks will appear on any Map of Cal. & from them you can locate the other points,

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

I Lan a good collection & May am
with a good library and willed run
to bring both up. Hence a lot of Jun specs
would be especially acceptable! ~~Also a~~
~~little of~~ That Echeveria 149 is from Bartletts Cañon
– Back of Santa Barbara where it grows out of the
dry clefts of the sandstone rocks. All I dont fer
under that number is I think part of that species.
Such is my impression but the but the long, narrow
grass leaved might by accident have gotten in with
the rest though I doubt it – You can bet
on "my shaver" of Arcuethobium and they
actually pulled me when I shook the limb to
which they were attached. Pinus Sabiana with
Arcuethobium & Cone all came from Walkers
Basin. In my range the tree was very
local. I only met it in Walkers Basin and
as far up as Weldon. (Say 25 miles north of
Walkers Basin) It presents a wonderfully
open appearance. You can look through the foliage any
where as far as the leaves are concerned. Pinus
Lambertiana I admit came to grief, but
I did the best I could for it. A pack train
is very apt to mash things up. I had it – and
two others wrapped up carefully in two large
bags, but still they were broken. The trees is not
uncommon where I was at from 5 to 7000 feet.
6000 being it best ground. I suspect 214 & 251 are
the same but am not quite sure. The so called black
pine and yellow pine though growing together and looking
very much alike are undoubtedly distinct. The lumbermen

Set a much higher price on the Yellow than for the other. Just send my note book in Washington so that I can see just in what the difference consists. The back of the Yellow pine is exactly that of P. ponderosa of 404 P. Baltimoriana I could get no cones. It was the highest tree on the mountain side I mean highest above the sea 12100 ft. on South side of Mt Whitney

266. 350 are rather rare in Southern Cal. Still I met with them in two places

I contemplate in a year, a winter visit to the Mexican Boundary. - Upon region I had my party now made up, will have to make it partly pay Expenses. but mean to go on my own hook. and look out for botany first last and all the time. To get several sets for exchange in Europe - for good specimens authentically determined. for my own collection. This is confidential - as I would not say now to have any one else go in on the ground I have blocked out. It is the only way I can bring my herbarium up. and I am determined to make it as full as possible. That oak 198. I reproach myself for not having obtained fruit of, but I suppose it to be so like Quercus that it would not be worth the climb. I was smug. Let me know any thing I can answer for you. So far I have about 7 new species. Not bad for so old a botanical field as Cal. but I can go in there again. Much caution in the

Dear Doctor

I must Explain to you how it came that Mr Watson obtained the thing we now know as Cotyledon laxa. I did not give it to two persons to Study. I sent it to Jno hoping Jno would do it up. — but at same time sent one set of my entire California Collection to them at Cambridge that they might utilize it in Preparation of Fl. Cal. and Among the rest this plant. When Jno told me the species was new - in writing to Watson I mentioned that fact that he being then just - almt that order might be on his guard and also communicate with Jno in the matter. So that this being the case I do not think I can be said to have asked two persons to study it:

I know my dear Doctor how exceedingly busy you must be. And hence will only say that Mr. Whelan is anxious to have his mss.

July 2nd 1876

Dear Doctor

Yours of June 14th has remained until now unanswered, it is too bad but I have been so taken up with the work of my class that I could do to nothing else. The scheme works admirably and will succeed. I mean it and each paper with 4 fine photos will receive for which "many thanks".

The plants of 1871.-3 are described in the pamphlet You have in which by an unfortunate slip of the pen I made Gentiana bubellata a var of another species. I hope you will incorporate from Mrs Watson portion of that pamphlet and from my own all the plants of Gray Families & Genera in my corrected copy

with My own Collection
of 74 & 5. The plants
of California I shall
put in as a mere list: refer-
ring to Hg Cal p. so far
as published for descriptions.
All other I must give descriptions
unless they are found in
Watson Vol 5 Kings Report or in
Gray Manual.
Whelan has just published Vol III
Zoology - and a large quarto
pamphlet about 200 pages of
Ornithology
I doubt whether I can do much
in botany this season but if I
can I will look after the distribution.
About that time of 74 I can forget
but remember this that I accept-
-ance grouping of Lines and Cones

as Comet Will Be when
in a few days I get at
my notes.

Whether would like his report
by number at furthest. If however
he Cant get it by that time, he
Cant. and that settles that
question. Ike has no appropriation
this year.

Yours Ever
J. F. Rothrock

Dear Doctor Engelmann

I had hoped ere this to have written you a letter at some length on a purely botanical subject but my time has been so fruitfully taken up that I have been unable to do so.

I now write to thank you for your kind words (concerning the Philadelphia candidature) & that all important vote. Its results - The chances look rather hopeless for me now but you they will terminate shortly - Thursday next - Dear Doctor — In haste but

Yours Ever

Rec Nov 13

Dear Doctor — I forgot to say that in your report you can by corresp omit all description of the California species — Give me only a list with any important items separately and I will put them in a an appendix The rest I want for the body of the work & describe except when in Vol. V. Kings report or in Gray Manual — Yours Rattock

Dear Doctor

And now can you have your MSS on the Umbels ready — Embracing in one all the representatives of each order published by Mr Watson and myself in the preliminary report July 1874 which you have, the specimens sent you from 1874 & 75 — and describing all not found in Watsons Botany of 40th Parallel and in Gray Manual? I think I have given you specimens of Cactaceae, Crassulaceae Euphorbiaceae Gentianaceae Asclepiadaceae Compositae Cupuliferae & Loranthaceae — in a word all your favorite orders. Mr Umbels is very anxious to get them as soon as possible

Yours Sincerely

D. L. Rattock

Rec'd No. 20

Tilden Park Nov 15. 1896

Dear Doctr

Your kind note just received. I shall not have my Miss ready for Columbus for say about three months. and if yours were in my hands by that time it will be early enough. And as for Q. grow Muricata, Chestnut rock oak — there is abundance of it growing in the mountains Nearby — at least I know of it at Mattle Mountain (mentioned by Mx) about 30 miles from here. but I think I can get some nearer. & will try coming Saturday. If I fail then I'll go first chance to Mattle Mountain. I will attend to all the prints for you.

I think the Philad appointment all right — but cant say for a month with certainty — Next summer again I must run my Mountain school — to force to all this

My idea was correct in starting it
and after that (how the thought
delights me!) to Arizona again -
You can't tell how hard the restraints
of civilization are upon the vagrant life
I have seen so much of. Still if I go to
Philadelphia I mean to sacrifice all my
own choice for the sake of starting
a decent department & stay there

Yours Truly
J. W. Strock

Wilkes Barre Nov 18. 1876

Dear Doctor

I have been of this morning after
the chestnut oak for you. The result is I have me
ett of specimens. good as far as they go. of what we take
that oak. While the leaves correspond admirably the
acorn does not It is much shorter than figured by Sprg.
You will however find that among the acorns &
and you is a great variation in size yet all come
from the same clump of trees on a high ~~dry~~ dry
dry Wilkes Barre Mountain at 1600 ft. above the sea.
I find the bark becomes rough at this altitude
much earlier than 500 feet lower down. in a
less exposed situation. I am no doubt you will
excuse my stupidity & at last guilty mistake "Carmichi"
when I take you that in spite of appearances I
believe No 1.- leaves & wood (I have no acorns) - is the same
with all the rest. The old woodman who was with
me settled the difficulty & difference by saying one
was he & the other she. In a few days I will get

0 1 2 3 4 5 6 7 8 9 10
cm

for some the specimens from the lower altitudes
on dome mountain and then send all on.
The acorns of No 1 I could not get, entirely.
Now I am not satisfied. At the
foot of South mountain is another oak with
bark still more like the chestnut & leaves dito
and with an acorn such as the figures. This
I will get for you as I can it is a fifty
mile ride but I will get as many I can.
I think however it is only a variety of what
I will send you in first package.

Yours Ever
J. M. Bebb

Acc Dec 9th
Acc same Day

Wilkes Barre Dec 7. 76

Dear Doctor

After various delays I have at last started you a box please be careful in taking out the papers as I have a few labels in them No 1. Wood & leaves dont look a little like chesnut oak there but under the circumstances in which I found it - I cant separate it from the other. Numbered one No 2 is wood & leaves from a chesnut oak 1000 feet below the others, just on the border of the white oaks.

The acorns belong to the Specimens without numbers and are clearly the first and most from one tree - Deep snow now covers the North Mountain locality at which I had hoped to have gone before the

but to which I am fear I shall have
to postpone a visit until Spring
when the acorns are much
longer & more like the fig[illegible]-
Yours
J. M. Buttrick

a No 1. foliage, Q. rubra
b " 2 " wood & bark of large tree
c 2 foliage of Prinus
d 2 Trunk on a tree 1 foot long nearly 3 inches diam.
not numbered: or by me numbered 3.
e foliage of wide & narrow leaved Prinus
f large piece of trunk & bark
g cylindrical section 6 inches high, 4" diam
h split section apparently of same, 2" high
i a branch, or shoot from the base 10 inches long 1/4 wide
K. acorns said to belong to this un numbered sp.
but non
Only a & K are rubra
All others b - i are Prinus, and most probably also the
wood, marked 1.

My Dear Doctr

As the matter now stands I have no print- y issue with you- and freely concede all you now demand-

In my last I did not express an opinion as to the species y Nol. Nord & Lear. I only said they came y the same tree. This you now grant and I much will not doubt if you call that tree, rubra- Though it has on its upper bark some very strange marks- Unfortunately it is now blown down- And we can never complete a series y specimens from it. The acorn question I freely yield. And next season will be glad to obey all your commands re specimens. I am not much satisfied with the specimens y 2 Instructs I have sent you

when spring opens I think I can do much
better in that species for Jim from Natta
mountains. In [illegible] Bishop under
Monticola. I am about done now
y the Shiloh place - but horror of horrors
just as I am about being fixed for life
my health shows signs of breaking down -
I sleepy so much from my head that I cant do
more than half a days work. and most of
the night toss about in bed like a lost soul
on the banks y the river Styx. Soon as I
am through with the Ulmus report and my
first course of lectures I must let up
study for a while.

Yrs Ever
G. Engelmann
